**This assessment is based on the Focus Ready Draft dated 12/10/2018.**

This PMN is an **Exposure Category 3**. Following considerations of human health and ecological hazard, environmental fate, and estimated manufacturing, processing and use releases, general population, consumer, and environmental exposures were not assess because all of the following conditions are met:

**Category 3**

- For the routes of concern identified, predicted environmental releases are expected to be negligible;
- Assessment of the other predicted environmental releases is not indicated by the identified routes of concern;
- No reasonably anticipated consumer exposures;
- Health concerns for susceptible subpopulations are not identified; and
- Chemical was not identified as being persistent and bioaccumulative during fate assessment
